Counselors,
Psychologist,
Psychiatrist

What is QPRT?

The QPRT suicide risk management inventory was developed to help professionals who assist, evaluate, counsel or treat persons at risk of suicide to better assess and assist those persons at elevated risk for suicidal behaviors.

QPRT is a risk detection, risk assessment and risk management tool designed to gather critical, standardized information about a person's status in an intake, screening or interview setting, while also establishing a safety/intervention plan for those determined to be at risk of suicide.

Training is FREE!
Lunch will be on your own.
